

ANUSHKA

Associate Product Manager

Bengaluru, India | +91 7310875606 | anushka00218@gmail.com | linkedin.com/in/anushka225 | Portfolio

Summary

Product Analyst with 2+ years of experience building AI-powered SaaS products and leading end-to-end product management across scheduling, quality assurance, and fulfillment workflows. Skilled in writing PRDs, defining product strategy and roadmaps, and driving cross-functional execution with engineering, data science, operations, and business stakeholders. Experienced with Agile/Scrum, user research, and AI-assisted rapid prototyping — translating ideas into functional, interactive prototypes that accelerate stakeholder alignment and speed up the feedback loop.

Experience

Product Analyst (Full-Time) Incruter India Private Limited

Jan 2025 – June 2026
Bengaluru, India

- Led end-to-end product development of a self-scheduling system — defined product vision, wrote PRDs, and coordinated go-to-market execution — reducing manual scheduling effort by ~40% and improving slot availability and utilization across 500+ interviews per month.
- Built an AI-powered auto-approval engine that automated quality checks across the fulfillment pipeline, reducing manual review effort by ~70%, enabling a leaner operations team, and significantly cutting turnaround time.
- Designed and deployed AI-powered workflow automation across three core operational pipelines (client onboarding, quality assurance, interviewer management), reducing manual fulfillment overhead by ~35% and enabling faster, more reliable product delivery.
- Engineered an automated resume-masking pipeline for high-volume candidate processing, collaborating with engineering to define a structured data schema and enforce compliance rules — improving data integrity and legal compliance at scale.
- Owned PRDs and product roadmaps in collaboration with cross-functional teams (engineering, sales, operations, customer success), aligning delivery with business OKRs and go-to-market plans.
- Served as primary point of contact for production issues and technical escalations, coordinating with developers to ensure timely resolution and maintain service quality across client-facing and internal platforms.
- Independently built a full interactive product prototype using AI-assisted design tools, translating product requirements into a functional mock-up that earned strong stakeholder buy-in.

Product Management (Intern) Inresco Technology Solutions

Dec 2023 – Sept 2024
Bengaluru, India

- Collaborated with a cross-functional team of 4–5 on product strategy — conducting market research, competitor analysis, and user interviews to surface demand patterns and prioritize the product roadmap against business OKRs.
- Managed product backlog and sprint planning using Agile/Scrum, writing user stories, acceptance criteria, and feature specifications prioritized with the MoSCoW framework.
- Partnered with data science and engineering to define requirements for AI-driven content generation features, including prompt engineering, model output evaluation, and iterative refinement.
- Enhanced a hiring platform with demand-driven features (leaderboards, interviewathons, AI-generated questions), increasing platform engagement and content availability for end users.
- Led development of dynamic product pages using Storyblok, improving product visibility and customer engagement across company offerings.

Projects

Agent Eval Harness

[Live Demo](#) | [GitHub](#)

- Built an automated evaluation framework scoring an AI support agent's behavior against guardrail, edge-case, and adversarial test scenarios before shipping, using rule-based checks plus an LLM-as-judge scoring layer.
- Identified and fixed 3 real evaluation bugs (a model deprecation, an invisible-Unicode keyword-matching failure, and a reasoning-model token-budget issue silently zeroing out scores), directly improving eval reliability.

Prototype Studio

[Live App](#) | [GitHub](#)

- Built an AI-powered prototyping tool that turns a PM user story into a live, working UI mockup with a visible design rationale, using structured input in place of generic prompt-based tools.
- Implemented account-based authentication and a Postgres database with Row Level Security to enforce per-user data ownership and close a free-tier API abuse risk identified during testing.

Skills

Product Management: Product Vision & Strategy, PRDs, Prototyping, User Stories, Acceptance Criteria, Product Roadmaps, Feature Specifications, Go-to-Market Planning, First-Principles Thinking

Analytics & Data: A/B Testing, Excel / Google Sheets, Datadog, MongoDB

Frameworks: Agile, Scrum, OKRs, Design Thinking, RICE, MoSCoW, Lean Product Development

Tools: Jira, Figma Make, Lovable AI, Miro, Storyblok, Google Workspace

User Research: User Interviews, Usability Testing, Persona Development, Journey Mapping, Surveys

Core Strengths: Stakeholder Management, Cross-Functional Collaboration, Analytical Thinking, Communication, Adaptability, Ownership

Education

B.Tech., Computer Science
Chaudhary Charan Singh University (CCSU)

CGPA: 8.02 / 10
Uttar Pradesh, India
